The Interdisciplinary Team Conference: More Than a FIM® Review

Does your interdisciplinary team conference documentation support CMS’s criteria by illustrating the interdisciplinary team’s discussion of the patient’s progress toward goals, barriers to discharge, and any necessary revisions of the treatment plan? This webinar focuses on the role of documentation in supporting the discussion that occurs during the interdisciplinary team conference. Accurate and detailed portrayals of the team’s discussions illustrate the collaboration of the team in the patient’s best interests.

Learning objectives:

- Describe CMS’s interdisciplinary team conference regulations.
- Examine documentation strategies for completing the interdisciplinary team conference document in order to demonstrate what actually takes place at the conference.
- Recognize that documentation is the only way to illustrate the interdisciplinary team approach to the delivery of care.
- Understand how to screen a team conference document to ensure that it addresses CMS’s requirements in lieu of an audit.
