

# UDS-PRO<sup>®</sup> System

# UDS-PRO<sup>®</sup> Desktop Software

As a result of subscriber feedback, version 4.1 of our UDS-PRO<sup>®</sup> desktop software includes many new enhancements. These new enhancements and our standard features combine to make the UDS-PRO<sup>®</sup> System the one outcomes system that will best serve the needs of your rehabilitation hospital.

## Automatic updates

This new feature can be configured to automatically detect, download, and install updates from UDSMR's website, reducing the burden of your IT department and increasing ease of use.

## Enhanced dynamic export

Version 4.1 offers better flexibility and powerful query-building options.

## Real-time reporting capabilities

The UDS-PRO<sup>®</sup> software includes a real-time reporting system. Our **Medicare Presumptive Eligibility Estimation Report (PEER)** shows facilities their estimated compliance with CMS's 60% Rule. Facilities that have received their presumptive eligibility test results from their FI or MAC have stated that our report has given them an estimate **within 1% of the actual percentage of qualifying cases**. Reports can be run with a variety of filters and options, such as payer, RIC, date ranges, and more. Other reports include LOS-to-date for patients in care, program management reports, and more.

## Custom fields

The UDS-PRO<sup>®</sup> software allows you to name your custom fields to better reflect the type of information stored in them. You can even configure them as dates, drop-down menus, or checkboxes.

## New case listing options

The case listing module features savable filters, print and export options, column selection features, and sorting options. The FIM<sup>®</sup> Track module provides rating assistance during the 3-day periods after admission and prior to discharge.

## HL7 interface

The UDS-PRO<sup>®</sup> software has HL7 interface capability, providing you with a robust platform that reduces data entry and integrates multiple information systems and diverse departmental systems.

## Mini-FIM<sup>™</sup> assessment tool

The pre-admission listing module includes the Mini-FIM<sup>™</sup> assessment tool, a 7-item assessment that projects a case's CMG and expected LOS. (It also projects the case's FPP if you have entered facility adjustment values.) This tool eliminates the need to complete the function modifiers and all 18 FIM<sup>®</sup> items at pre-admission. You can also code a reason for a patient's nonadmission to your facility. The reason for admission denial is selected from a customizable list. Potential 60% Rule presumptive compliance statistics are also shown.

## New CMG options

Version 4.1 offers three CMGs for optimal flexibility. In addition to the payment CMG that we have always included, your cases now include a reporting CMG for cross-comparison and a dynamic CMG you can calculate using any of the CMG groupers available.

## Enhanced Profile Report capabilities

Our enhanced Profile Report includes case-based CMG goals and 50th, 75th, and 90th percentile goals for the patient. These goals are based on outcomes from hundreds of thousands of IRF-PAI cases.

## Cost fields, referral information, and resource utilization

The UDS-PRO<sup>®</sup> software contains fields that you can use to track costs, referral information, and resource utilization. Not only can you track cost information for each patient, but you can set up facility cost averages by CMG, RIC, or IGC. In addition, new fields for bed number, room number, floor number, and referring physician have been added. And you can save federal prospective payment (FPP) values with effective dates. This information provides accurate historical calculations in the event that your facility's wage index changes or that CMS again changes the standardized payment conversion factor (SPCF, formerly BNCF).

## Informatics data

Our informatics module allows you to compare your facility's real-time data with regional and national benchmark data by reporting CMG to analyze patient expectations for goals and discharge planning.

## Patient satisfaction survey

Our patient satisfaction survey module allows you to track patient satisfaction at admission, discharge, and follow-up and includes import/export capabilities.

## Audit Denial Tracking System module

The ADTS module allows you to manage documentation requests and payment denials as they progress through the appeals process. ADTS reports are available from the real-time reports module.

## More features

The Citrix-enabled UDS-PRO<sup>®</sup> desktop software includes a wide variety of features, including backup scheduling, data archiving, FTP settings, session timeout, enhanced user security features, full logging, and multi-facility configuration options.
