JOB POSTING

Developer - Programmer/Analyst

Full time position

For over 30 years Uniform Data System for Medical Rehabilitation (UDSMR) has provided its subscribers a comprehensive array of software products and services for reimbursement, consulting services, functional measurement, management, and regulatory agency compliance. UDSMR is the industry leader in producing data outcomes to inpatient rehabilitation facilities, skilled nursing facilities, and various outpatient venues.

UDSMR software products and systems utilize a broad array of programs including latest technology and opportunities to work in a collaborative team environment.

UDSMR is a proven leader in providing outstanding customer friendly systems and a premier level of customer support. UDSMR offers a stimulating team-oriented office environment, excellent opportunities, competitive salary commensurate with experience, & a generous benefit package.

The primary function of the Developer - Programmer/Analyst is program analysis, programming and software deployments, of all aspects of the internal and external programming requirements of UDSMR.

The Developer - Programmer/Analyst will have responsibility for the following:

• Maintenance and troubleshooting of all existing program code and scripts.
• Internal and external software source code documentation.
• Development of any new applications and reports based on the needs of the company.
• Participation in multi person software development projects.
• Analysis of new tool sets for software development.
• Interacts with outside vendors and clients.
• Adhering to UDSMR programming standards and guidelines.
• Assisting the Production Department with running and debugging programs, scripts and reports.

Job Requirements:

• B.S. in Computer Science required.
• Two years of on the job experience in program development using current software development tools.
• In-depth knowledge of Builder C++, C, Oracle, SQL-Server, .NET, and other programming languages and databases.
• Knowledge and experience in SQL Server Database and SQL Reporting Services, a plus.
• Knowledge and experience with HL7, a plus.
• Knowledge and experience of system hardware (network components, servers, workstations, peripherals, printers, multimedia devices, etc.).
• Knowledge and experience of network operating system platforms and protocols.
• Knowledge and experience of system applications (server applications, client-side applications, etc.).

UDSMR is an Equal Opportunity Employer /Affirmative Action Employer Minority, Female, Veteran, Disability and LGBT
