The PPS Coordinator and the Coder: Bridging the Gap for Accurate Coding and Compliance

Presented by a PPS coordinator and a medical records coder, this webinar will specifically identify the coding nuances that differentiate the IRF-PAI and the UB-04. The presenters will focus on how these two staff members need to work together in tandem and how incorrect coding could not only result in failing to identify cases that would qualify with the 60% rule, but also affect reimbursement.

Learning objectives:

• Identify relevant ICD-10 guidelines for the IRF PAI and the UB-04
• Discuss coding challenges faced by the PPS coordinator and the medical records coder and explain how they can collaborate to overcome these challenges.
• Examine how coding practices affect compliance and payment.
• Review IRF-PAI coding and UB-04 coding using scenarios.
