Customized QI Coding Consultations

Improve your facility's QI coding outcomes with our customized consultations!

UDSMR/McBee offers the following services, all of which are customized to meet your IRF's specific needs:

- **Four-digit case-mix group (CMG) audits:** McBee will review your facility's impairment group codes (IGCs) and admission codes for sections GG and H on the IRF-PAI and will analyze the effects of these factors on your facility's reimbursement. As an optional add-on, McBee will review your facility's section GG discharge codes and will analyze the effects of these codes on your facility's outcomes.
- **Data analysis and operational consultation:** For UDS-PRO® software subscribers, McBee will analyze relevant facility data and conduct a two-hour consultation with your team to discuss specific outcomes, benchmarks, opportunities, and report interpretations based on this data analysis. McBee will interview applicable staff (therapists, nurses, PPS coordinator, etc.) who are directly involved with your facility's operational procedures, including data collection and documentation practices for completing sections GG and H on the IRF-PAI.
- **Quality indicator education consultation:** McBee will utilize the results of the data analysis and operational consultation to develop and conduct live customized quality indicator training that focuses on accurate coding of sections GG and H.

These services can be provided separately or in combination. They can also be conducted on-site or virtually! Our clinical consultants can provide similar services to non-UDSMR subscribers.

For information about these services, contact irfeducation@mcbeeassociates.com.
