The RehabConnect™ Advantage

System framework

◉ Cloud or facility-hosted server options for working in Citrix and VMware environments

◉ Instant exchange of IRF-PAI data between the RehabConnect™ System and the UDS-PROi® software

◉ A wide choice of installation options, including:

– Simple, noninterfaced, out-of-the-box setup

– Comprehensive, seamless HL7® interfacing with EMR and billing systems exchanges

– Automated PDF clinical document exchange to medical records for concurrent information and storage

◉ A billing module that incorporates the hospital's chargemaster into appropriate therapy documents for easy integration of therapy codes and units of service back to the billing system in real time

◉ Simplified sign-on and enhanced security with optional LDAP/SSO solutions

◉ Semiannual updates that maintain CMS's latest IRF PPS standards and requirements at all times

Clinician tools

◉ A collection of ready-to-use physician, nursing, and therapy templates

– Facility-defined mandatory fields and/ or discipline-specific expectations within documents

– Built-in section GG coding assistance, including detailed drop-down selections

– Copy-forward functionality with clinician access set by administrative users

– Integrated therapy tracker that compiles minutes and modes, transfers information to the IRF-PAI, and provides weekly summaries of your patients' daily compliance with CMS's therapy-intensity rule

◉ SmartQI™ logic that tracks the patient's initial assessment and all other relevant QI documentation and recommends the optimal admission and discharge codes

◉ Electronic "sticky note" feature that facilitates real-time team communication about the patient

◉ Quickly assembled plan of care (IPOC) and weekly team conference, compiled from relevant clinical assessments and progress notes

Administrative oversight

◉ Individual end-user to-do lists with automatic reminders and warning flags for missing or pending CMS requirements or facility-defined criteria

◉ Report views that trend patient data for numerous variables, including therapy minutes, section GG codes, vitals, education, and pain

◉ Real-time document status reports and other oversight tools that provide elevated views for managing entire documentation processes

◉ Collation of all pertinent information into one location for easy review before data is committed to the IRF-PAI
