

The UDS-PRO[®] Advantage

Software

- Cloud solution that provides secure, efficient IRF-PAI data collection and CMS submission processes
- Compatible with latest version of Internet Explorer, Safari, Mobile Safari, Google Chrome, and Firefox
- Simplified sign-in procedures available with optional LDAP and SAML login and added security with two-factor authentication
- A physician portal that allows read-only and sign-off access from laptops, tablets, and phones
- Easy XML import/export options, including a compatible file format for CMS submissions and a CMG export file that sends relevant CMG data to your billing department for reconciling the UB-04 with the IRF-PAI
- Optional automated nightly and weekly data extractions into your hospital's data warehouse
- Optional HL7[®] interfacing with any EMR for ADT/DFT, IRF-PAI, and document exchange (PDF)
- Historical database conversions
- Enforcing data-entry logic for the BIMS, section GG, and pressure ulcers
- Assigning the correct CMG and case tier
- Real-time dashboard updates throughout the stay for CMG, 60% compliance status, expected vs. actual length of stay, facility-specific payment expectation (FPP), dash warnings, and motor score
- Valuable ICD coding lookup tool that helps select the correct etiologic diagnosis, identifies ICD combination codes, and prioritizes your IRF-PAI ICD code list based on optimal tier selection and compliant coding
- Case-level CMS risk-adjusted expected self-care and mobility values that assist with goal setting and discharge planning

Resources

- QI credentialing module that provides a fluid process for administering tests, monitoring testing progress, evaluating your staff's rating proficiency, and testing new associates
- Exclusive online library of clinical resources, training materials, and CMS references
- Complimentary bimonthly software and report training
- Clinical and coding help desk support from 8:00 a.m. to 5:00 p.m. Monday to Friday

Benchmarks

- Largest independent database, representing over 80% of all IRFs, with stable performance targets
- Severity-adjusted reports with state, regional, national, and facility-level comparatives
- User-friendly drill-down and export capabilities

Features

- Maintained to stay current with CMS's IRF PPS rules and standards at all times
- Preadmission module that captures key IRF admission criteria, sends physician email alerts, monitors signature time frames, and can send the preadmission screen to your EMR as a PDF file via HL7[®] interfacing
- Rock-solid CMS data transmission process with twenty years of uninterrupted CMS data file and IRF Grouper experience
- Validation checks that minimize errors and optimize case information prior to CMS submission by:
 - Flagging overuse of dashes on quality indicator items
